

## Pick-to-Light: All-in-one Solutions

Pick-to-Light solutions from Turck are based on IP67 components to allow robust, fast and error-free installation without the need for a control cabinet. The plugand-play qualities inherent to an IP67 solution result in reduced installation times coupled with an almost 100 % error-free installation with drastically reduced labour costs. Solutions using IP20 components are also available on request.

SERVICE

Due to a modular hardware and software approach, tailor-made complete solutions can be readily and cost-effectively realised to our customers' requirements. Our experience in this field and our ability to provide one-stop shopping for the complete solution ensure that all components interoperate perfectly.

### Pick-to-Light functionality

- Control the picking/production sequence
- Change the sequence via e.g. RFID or database
- Manual teaching of sequences
- Wireless connections to comissioning trolleys and other mobile objects
- Error handling and documentation
- Optional HMI for visual feedback, configuration and information
- Authorisation/clearance using RFID, barcode, HMI...
- Restocking etc. using barcodes, RFID...

## Pick-to-Light: All-in-one Solutions for Assembly and Picking Applications

Turck Pick-to-Light solutions provide operators with a visual indication of the required part in an assembly sequence. Actions (correct or false) are indicated by means of lights and optional audible signals. Completed operations can either be automatically or manually acknowledged.

All components in Turck Pick-to-Light systems are perfectly matched ensuring quick and reliable installation and maintenance.

#### Process optimization

- Visual process management opens up manifold possibilities for process improvement:
- Improved flexibility; personnel require next to no training
- Improved and repeatable process quality
- Quality management/control by means of process logging
- Interfaces to warehouse control, ERP-systems...
- Drastically reduced installation, commissioning and maintenance times
- Virtually 100 % error free installation

Operator/maintenance interface (HMI)

- Information
- Control
- Setup

#### Control and interface

- CODESYS programming environment Fieldbus and Ethernet gateways as well as block modules
- Collects and processes all signals
- Industry standard connectors
- Robust, IP67 (IP20 also available)

#### Wireless communication

- For mobile rack/trolley applications Can allow battery power to avoid
- trailing cables
- Secure wireless connections
- Flexible topologies
- Connection technology
- Ready-made and field-wireable
- Ethernet switches
- Connection accessories
- Splitter systems

### **Operate & Control**

Turck's HMI/PLC TX500 can be programmed via CODESYS, as well as the fieldbus gateway of the IP67 I/O system BL67 or the block I/O module TBEN-L, which can both be installed directly on the system. The rugged controllers can be mounted without the need for a control cabinet.

**Connect & Transfer** Turck offers a wide range of components to implement connection to higher level control systems (ERP etc.) and plant I/O. Industrial wireless components are also available to reduce cabling costs.

#### **Display & Acknowledge**

Turck's extremely varied range of indicators and sensors guarantees that the right device for the job in hand is available

- For profile or 28 mm tubing
- Protective housings

#### Install & Extend

An elaborate range of mounting accessories and protective housings ensures quick and cost-effective installation and asset protection.
