

## Industrial Automation

### **FIELDBUS COMPONENTS FOR FOUNDATION™ FIELDBUS**

# FIELDBUS COMPONENTS FOR FOUNDATION™ FIELDBUS

## Fieldbus systems in process automation

Fieldbus systems have become prevalent in the field of process automation in addition to decentral peripheral systems. FOUNDATION™ fieldbus and PROFIBUS-PA fieldbus systems are now the established fieldbuses in this field (for further information about the TURCK-product portfolio and in particular PROFIBUS-PA products, please see catalog D301026). The advantages of both of these systems are the process adapted specification and the real interoperability of field devices from various manufacturers and their compatibility with external host systems.

Both the FOUNDATION™ fieldbus and PROFIBUS-PA fieldbus fulfil the demands of the chemical, pharmaceutical and petrochemical industries. The most important features are :

- standardised user profile
- suited for use in explosion hazardous areas
- bus supply and fieldbus communication via shielded and twisted pair cables
- online device exchange without affecting system processes
- diagnostics for Asset Management

Comprehensive tests performed by the industry, interest groups and committees confirm the unlimited suitability of both bus systems for use in process engineering.

## TURCK fieldbus components

With TURCK products you are not tied down to company-specific fieldbus technologies, but can choose the most suitable bus product for your application from a comprehensive product spectrum.

TURCK offers the complete range for all conventional industrial fieldbus systems in factory and process automation, no matter whether you require junction modules, connection products or even complete systems.

TURCK fieldbus components are specially designed for the harsh industrial environment. The extensive product line for diverse applications fulfils all demands and provides Plug & Play connectivity to ensure fast and easy connection of the field device to the control system.

Fieldbus cables and cordsets in various fieldbus standards and materials and with different connector types are available for data transfer and voltage supply of the stations.

## Junction modules in IP67

### (1, 4 and 6 ports)

- Device versions for use in:
  - zone 1
  - zone 2
  - Non-Ex area
- Adjustable current limitation
- Switch-in terminating resistors
- Housing material: powder-coated aluminium die-cast (4- and 6-port types) or encapsulated Polyurethane (PUR) for the single channel versions.
- Connection technology: cable glands or flange connections in 7/8" or M12 x 1, stainless steel

## Junction modules in IP20

### (4, 6, 8 and 12 ports)

- Device versions for use in:
  - zone 1
  - zone 2
  - Non-Ex area
- Adjustable current limitation
- Switch-in terminating resistors
- Housing material: aluminium
- Connection technology: cage clamp terminals or removable connectors

## Multibarriers in IP66 (4 ports)

- Installation in explosion hazardous areas (zone 1)
- Galvanic isolation between the EEx i outputs and the EEx e main cable as well as between the individual EEx i outputs
- Fieldbus power supply according to enhanced safety EEx e
- Four intrinsically safe EEx ia outputs, 4 x 40 mA, short-circuit protected and non-interacting
- FISCO and Entity conform outputs (IEC TS 60079-27)
- Short-circuit indication via LEDs (inside housing)
- Integrated terminating resistors (switch-in)

### Diagnostic Power Conditioner System

- Segment and system diagnostics
- Commissioning support
- Longterm diagnostics via FF-HSE
- FF functions blocks for diagnostic alarms
- Diagnostics via DTM and/or DD
- Redundant power supply
- High output power for extended fieldbus segments (800 mA, 30 VDC)
- Complete galvanic isolation

### FISCO and FNICO power supply

- Integrated repeater function
- Certified to FISCO and FNICO
- Switch-in terminating resistor
- Switch-in power supply for the host
- Output current:
  - 120 mA or 265 mA for FISCO
  - 180 mA or 320 mA for FNICO

### Terminating resistors

- Versions for intrinsically-safe and non-intrinsically safe circuits
- M12 x 1 or 7/8"
- Plug-and-Play technology
- Connector pin assignment conform to CENELEC standard EN 50044

### Fieldbus cable available as bulk cable or premoulded

- For indoor and outdoor use
- For connection to field-wireable M12 x 1 or 7/8" connectors, PG9 or M16/M20 cable glands
- Simple installation via Fast-Assembly™ technology
- Just-In-Time delivery by the TURCK-JIT-5D-programme: Delivery of all available premoulded cable lengths within 5 days.

### Connectors

- Connector size: M12 x 1 or 7/8", type: straight or angled (angled M12 x 1 only)
- Plug-and-Play technology
- Load capacity: 7/8" with 9 A, M12 x 1 with 4 A
- Connector pin assignment conform to CENELEC standard EN 50044

### Special accessories

- Stripping tool, stripping of round (shielded) data conductors from 2.5...8 mm Ø (also for FastConnect®/Fast Assembly™),
- Special tool for cable glands on multibarrier and junction modules
- Closure caps and feed-throughs in 7/8" and M12 x 1

### Flange connections

- Field-wireable or prefabricated
- Connector size: M12 x 1 or 7/8"
- Solderable and screw-type versions
- Standard installation thread
- Stainless steel housings

# **Service & Support**

A fast delivery service and a comprehensive e-support system perfectly complement the extensive TURCK program.

With the product database, available on [www.turck.com](http://www.turck.com), TURCK offers a fast way to problem solving around the clock, seven days a week, at any place in this world and in six different languages.

Around 13000 products, clearly structured and completely documented, are ready for you to download together with all the necessary information you need.  
Please have a look on: [www.turck.com](http://www.turck.com)

# FOUNDATION™ fieldbus

## Basics

### FOUNDATION™ fieldbus – Bus physics

With the publication of the international standard IEC 61158-2 in October 1994, a suitable transmission technology was determined and internationally specified for the application areas of FOUNDATION™ fieldbus and PROFIBUS-PA. This was later integrated into the European standards as EN 61158-2.

Both systems comply with IEC 61158-2 and operate on the voltage mode with a transmission speed of 31.25 kBit/s. In this way the data packages are modulated onto the supply voltage for the fieldbus station and transmitted via a shielded two-wire cable (see Fig. 1).

These bus physics offer a decisive advantage: fieldbus communication and power supply of the bus station can be implemented using a single cable. These bus physics lead to enhanced operational safety and lower costs compared with the conventional fieldbus solution used up to this point with its additional wiring effort.

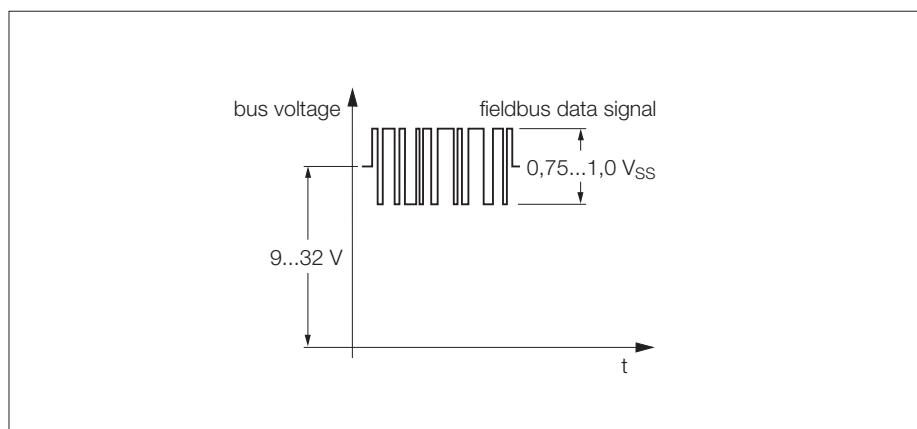

Fig. 1 Transmission of data packages to IEC 61158-2

### Characteristic features of the IEC 61158-2 transmission physics

<b>Data transmission</b>	digital, bit synchronous, Manchester coding
<b>Transmission speed</b>	31.25 kBit/s, voltage mode
<b>Data security</b>	preamble, fault protected start and end delimiter
<b>Cable</b>	shielded and twisted 2-wire cable
<b>Remote supply of the stations</b>	optionally via signal cables
<b>Protection classes</b>	intrinsically safe (Ex ia/ib or Ex nL), increased safe (Ex e or Ex nA) and explosion protected (EEx d/m/p/q)
<b>Topology</b>	spur and tree topologies; also in combination
<b>Number of stations</b>	up to 32 stations per cable segment
<b>Repeater</b>	can be extended with a maximum of 4 repeaters

## FOUNDATION™ fieldbus – Topology

The FOUNDATION™ fieldbus network is either

- opened directly via a FOUNDATION™ fieldbus segment card from the process host system and supplied via the TURCK DPC system (diagnostic power conditioner system) (Fig. 2 and 3)
- or
- enabled via a “linking device” by high speed Ethernet (HSE).

We recommend the use of TURCK multibarriers for a FOUNDATION™ fieldbus application in the explosion hazardous area (Fig. 3) which can supply up to 32 stations (in the explosion hazardous area) when “cascaded”. The benefits compared to a simple intrinsically safe power supply device are primarily the enhanced number of stations within a bus segment. Furthermore, a higher level of security is given by the enhanced level of availability provided by the galvanic isolation to all sides in the barrier (refer to page 33 for more details).

The number of multibarriers, which can be switched in, and the usable cable lengths depend on the output power of the power conditioner and also on the cable type. TURCK recommends the long-distance cable type FBY.../LD (see page 125) for the main cable (trunk line); for the outputs the standard cable type FBY.../SD (see page 124) is recommended.

Both system configurations in Fig. 2 and 3 are operated with the TURCK DPC system (diagnostic power conditioner system, see from page 10 on). Due to the high output power of the DPC system, segments can be extended up to 1900 m.

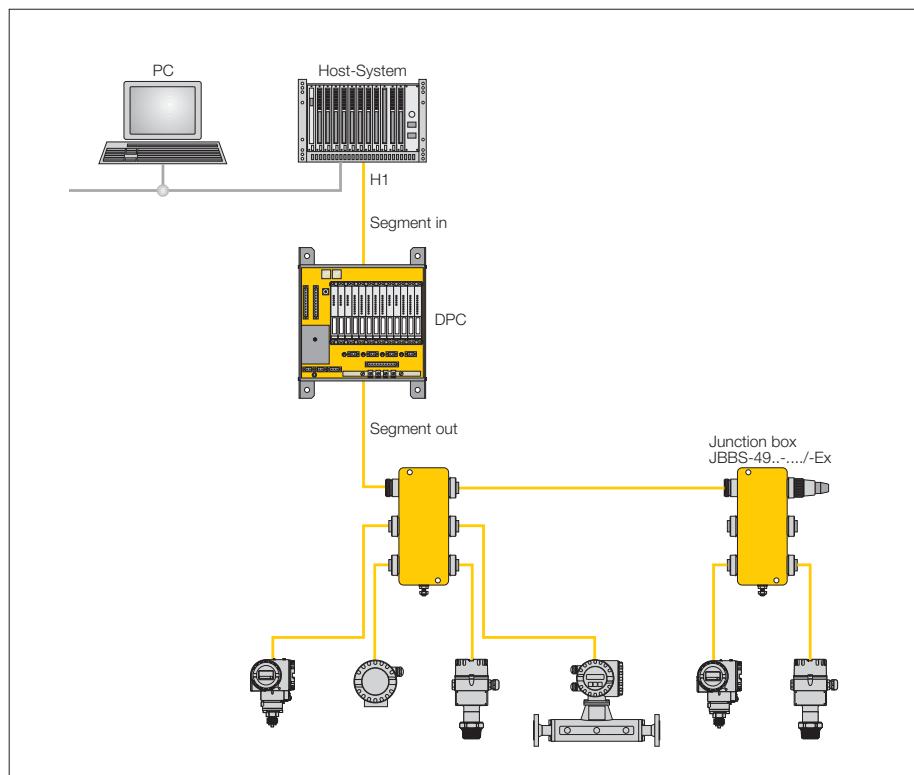

Fig. 2 Topology – FOUNDATION™ fieldbus in the non-explosion hazardous area

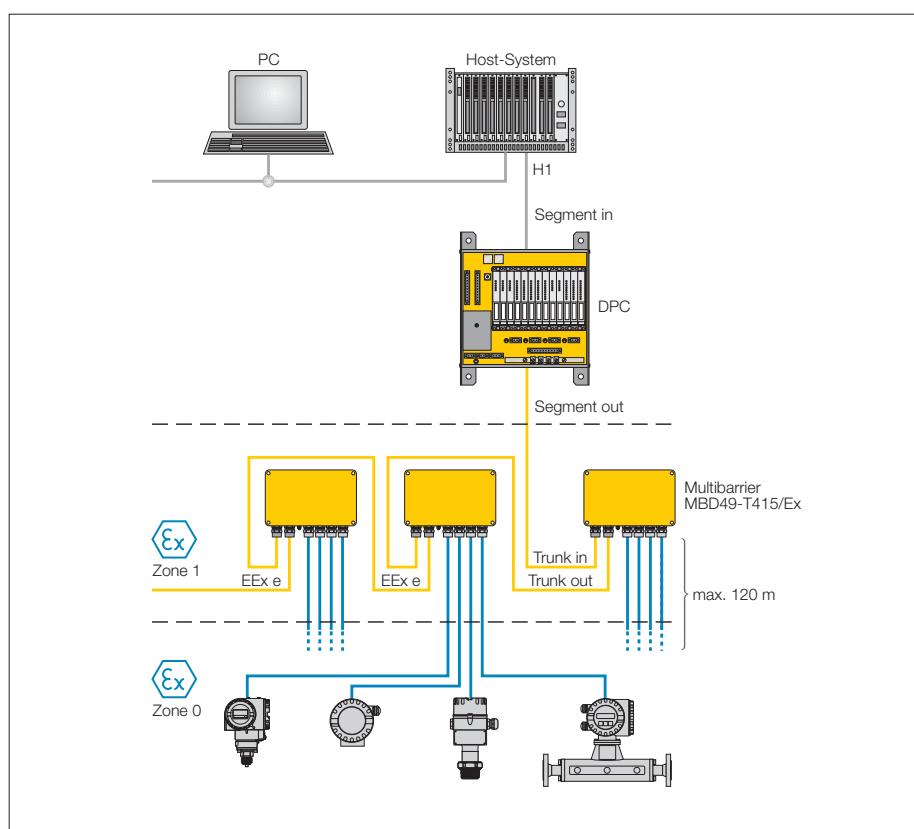

Fig. 3 Topology – FOUNDATION™ fieldbus in the explosion hazardous area

# FOUNDATION™ fieldbus

## Basics

In zone 2 a simple but safe energy limitation is necessary. Fig. 4 shows a FOUNDATION™ fieldbus network topology for zone 2. The power limitation can of course be implemented in the power supply, e.g. with the TURCK-FNICO-Power-Supply. The advantage is, that working within zone 2 is possible while the system is under power. The disadvantages are, the low number of field devices per FNICO-Power-Supply and a limited segment extension of 1000 m maximum.

Due to these disadvantages TURCK recommends the combination of the power conditioner and the TURCK junction boxes with short circuit protection, also applicable in zone 2. The trunk line is fed with explosion protection Ex nA, as the output of the power conditioner is voltage limited. The limitation of power in the junction boxes is implemented such that the circuits of the drop line are limited according to Ex nL. Therefore working at the field devices during operation is possible and the segment can be extended up to 1900 m max. (Fig. 5).

A FOUNDATION™ fieldbus network in non-Ex and Ex areas can also be established via a HSE-H1 link.

HSE stands for "High Speed Ethernet" and supports Ethernet fieldbus solutions. In addition to the Ethernet protocol family, the HSE also supports the FOUNDATION™ fieldbus H1 protocol. As a result, it is possible to access every Ethernet based network with a transmission speed of 10...1000 MBit/s in H1 fieldbus segments.

HSE and H1 have been fundamentally developed as supplementary networks. Whereas H1 has been optimized for applications in traditional process automation, HSE is more suited for high performance process control applications. Attractively-priced, commercial standard Ethernet devices can be operated in HSE applications.

The combined H1 and HSE fieldbus solution enables complete integration of fundamental and complex industrial process instrumentation and measurement into the higher level control system. This kind of integrated architecture not only helps to reduce system downtimes but also provides improved diagnostic functions and better user information.

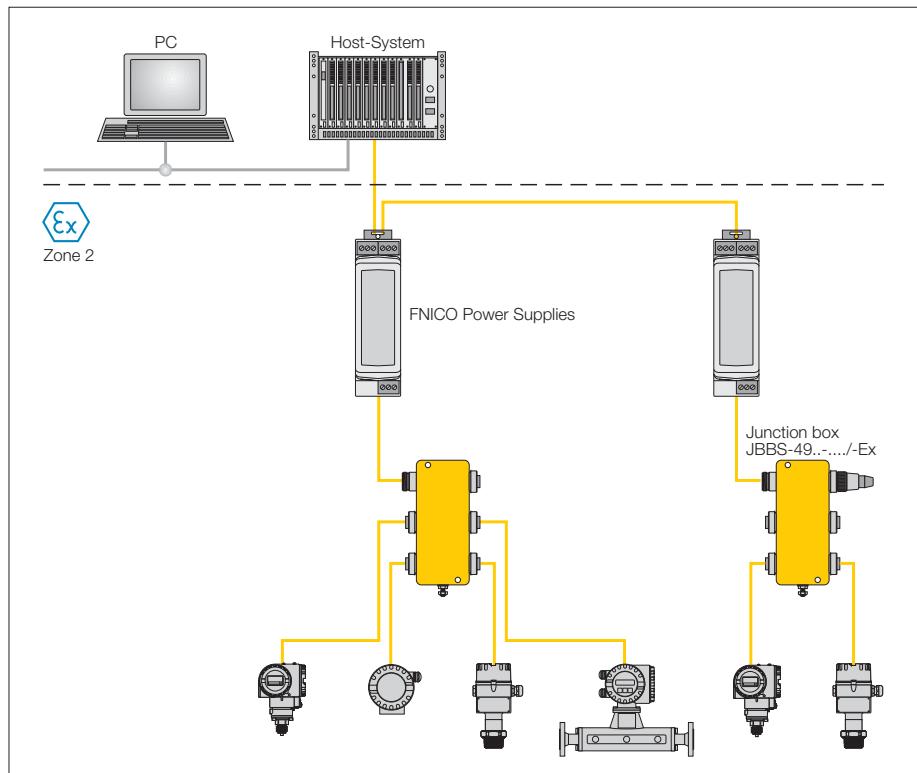

Fig. 4 Topology – FOUNDATION™ fieldbus with FNICO power supply in zone 2

Application:

✓ = allowed

— = not allowed

- 1) Use only permitted when installed in an additional housing (minimum IP54 degree of protection)
- 2) Equipment with differing protection classes – only the EEx i outputs have intrinsically safe circuits
- 3) Taking consideration of the EN 60079-0, EN 60079-11 and EN 60079-14 standards

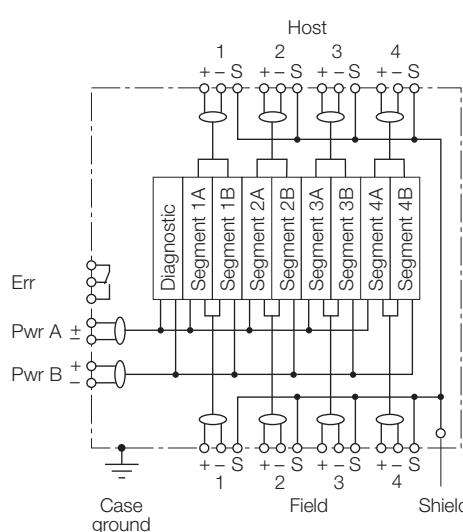

**CAUTION**

If previously operated in non-intrinsically safe applications, subsequent installation in intrinsically safe applications is not allowed.

# FOUNDATION™ fieldbus

## Backplane for the DPC system

### DPC-49-4RMB

The DPC system (Diagnostic Power Conditioner) is a power supply system for the installation of FOUNDATION™ fieldbus H1 segments. It provides extensive diagnostic options for monitoring FOUNDATION™ fieldbus segments and thus supports plant-wide asset management.

A DPC system consists of one or more module racks, each with up to eight DPC-49-IPS1 power supply modules and one DPC-49-ADU resp. DPC-49-DU diagnostics module. Up to four H1 segments for each module rack can be operated and monitored redundantly in the FOUNDATION™ fieldbus network. The diagnostic data of the H1 segment can be transmitted via the HSE interface module DPC-49-HSEFD/24VDC to the higher level asset management system (only in conjunction with the diagnostics module DPC-49-ADU).

The module rack consist of a backplane and the actual rack system for the power supply modules and the diagnostics module.

The single components of the system are electrically linked via the connection terminals of the backplane. From electrical perspective, the backplane is to be considered passive.

The power can be supplied via two 2-pole screw connectors. The connection of the host system is established per segment via removable 3-pole screw terminals.

For the connection of the H1 segments to the fieldbus side, each segment is individually connected with a removable 3-pole screw terminal.

The shielding is achieved via insulated shield bus or via the 3-pole screw terminal, which is internally connected with the M5 threaded bolt for equipotential bonding. A further M5 threaded bolt for equipotential bonding is simply connected to the housing.

For simple diagnostics processing, a connection is provided to the relay alarm contact of the diagnostics module.

- **Module rack for up to 8 power supply modules and 1 diagnostics module for the mounting of up to 4 H1 segments.**
- **Redundant power supply**
- **Removable terminal blocks with screw connections**
- **RJ45 connector for HSE fieldbus diagnostics**

## Power supply module

### DPC-49-IPS1

The DPC system (Diagnostic Power Conditioner) is a power supply system for the installation of FOUNDATION™ fieldbus H1 segments. It provides extensive diagnostic options for monitoring FOUNDATION™ fieldbus segments and thus supports plant-wide asset management.

A DPC system consists of one or more module racks, each with up to eight DPC-49-IPS1 power supply modules and one DPC-49-ADU resp. DPC-49-DU diagnostics modules. Up to four H1 segments for each module rack can be operated and monitored redundantly in the FOUNDATION™ fieldbus network. The diagnostic data of the H1 segment can be transmitted via the HSE interface module DPC-49-HSEFD/24VDC to the higher level asset management system (only in conjunction with the diagnostics module DPC-49-ADU).

The power supply module provides up to 30 VDC and 800 mA for the installation of a H1 segment. The network topology can be extended to 1900 m, due to the high output

performance.  
If two power supply modules are connected, the segment can be operated redundantly. Thereby the modules can be plugged and unplugged during operation (Hot swap-able in run).

Due to complete galvanic isolation,  
H1 to H1,  
H1 to internal supply,  
H1 to the diagnostic module ,  
H1 to HSE diagnostic bus,  
formation of parasitic voltages is avoided  
and error-free communication is guaranteed.

Local commissioning and diagnostics are supported by the following LED indications:

Pwr: green: Operational readiness  
ON/OFF: yellow: Output ON:  
Load: yellow: Consumer (field device) detected at segment:  
Com: yellow: Communication display  
Fault: red: Short-circuit message

- Supply of one FOUNDATION™ fieldbus H1 segment
- Output current: 800 mA
- Output voltage: 28...30 VDC
- Local diagnostics via LEDs
- Complete galvanic isolation

## FOUNDATION™ fieldbus

### Diagnostic module

#### DPC-49-DU

The DPC system (Diagnostic Power Conditioner) is a power supply system for the installation of FOUNDATION™ fieldbus H1 segments. It provides extensive diagnostic options for monitoring FOUNDATION™ fieldbus segments and thus supports plant-wide asset management.

A DPC system consists of one or more module racks, each with up to eight DPC-49-IPS1 power supply modules and one DPC-49-ADU or DPC-49-DU diagnostic modules. Up to four H1 segments per module rack can be operated and monitored redundantly in the FOUNDATION™ fieldbus network. The diagnostic data of the H1 segment can be transmitted via the HSE

interface module DPC-49-HSEFD/24VDC to the higher level Asset Management system (only in conjunction with the diagnostics module DPC-49-ADU).

The DPC-49-DU monitors the external power supply at the module rack, the FOUNDATION™ fieldbus-H1 power modules and their redundant operation mode. The diagnostic function can be switched off separately for each segment.

The device features three LEDs indicating the operating status. Alarm messages are indicated by a red LED. Alarm signals are also output via a relay contact.

- **Redundancy monitoring of 4 H1 segments.**
- **Local diagnostics via LEDs**
- **Alarm signal via relay contact**
- **Complete galvanic isolation**

## Diagnostic module

### DPC-49-ADU

The DPC system (Diagnostic Power Conditioner) is a power supply system for the installation of FOUNDATION™ fieldbus H1 segments. It provides extensive diagnostic options for monitoring FOUNDATION™ fieldbus segments and thus supports plant-wide asset management.

A DPC system consists of one or more module racks, each with up to eight DPC-49-IPS1 power supply modules and one DPC-49-ADU resp. DPC-49-DU diagnostics modules. Up to four H1 segments for each module rack can be operated and monitored redundantly in the FOUNDATION™ fieldbus network. The diagnostic data of the H1 segment can be transmitted via the HSE interface module DPC-49-HSEFD/24VDC to the higher level asset management system (only in conjunction with the diagnostics module DPC-49-ADU).

The diagnostics module DPC-49-ADU is used as a diagnostic interface between H1 segments and the HSE interface module. The diagnostics module monitors the electrical and the communication parameters of the H1 segments. Operation without diagnostics module is possible.

The diagnostic information is collected in the device and transmitted via the HSE interface module to the higher fieldbus level (e.g. the host) as diagnostic and alarm data. Thereby the modules can be plugged and unplugged during operation (Hot swap-able in run).

The device features LEDs indicating the operating status of the H1 segments. A pre-alarm is indicated by a yellow LED, the main alarm by a red LED. Additionally, alarm signals can be analysed via a relay contact.

- **Long-term diagnostics for 4 H1 segments**
- **Local diagnostics via LEDs**
- **Alarm signal via relay contact**
- **Complete galvanic isolation**

## HSE field device

### DPC-49-HSEFD/24VDC

The DPC system (Diagnostic Power Conditioner) is a power supply system for the installation of FOUNDATION™ fieldbus H1 segments. It provides extensive diagnostic options for monitoring FOUNDATION™ fieldbus segments and thus supports plant-wide asset management.

A DPC system consists of one or more module racks, each with up to eight DPC-49-IPS1 power supply modules and one DPC-49-ADU resp. DPC-49-DU diagnostics modules. Up to four H1 segments for each module rack can be operated and monitored redundantly in the FOUNDATION™ fieldbus network. The diagnostic data of the H1 segment can be transmitted via the HSE interface module DPC-49-HSEFD/24VDC to the higher level asset management system (only in conjunction with the diagnostics module DPC-49-ADU).

The diagnostic data of up to 16 H1 segments are transmitted by the HSE interface module DPC-49-HSEFD/24VDC via the FOUNDATION™ fieldbus-HSE to the higher level asset management system. Only diag-

nostics data of the DPC-49-ADU are transmitted via the HSE interface module but not the process data of the H1 segments. Each diagnostics module monitors up to four H1 segments.

As a FOUNDATION™ fieldbus device the HSE interface module features a resource and transducer block as well as several standard function blocks. On the basis of these standard function blocks, suitable applications can be programmed in the control system for the analysis of diagnostic data.

#### Features

- HSE interface device for transmission of diagnostic data
- FOUNDATION™ fieldbus function blocks for remote diagnostics
- Local diagnostics via LEDs

# FOUNDATION™ fieldbus

## Power conditioner, dual channel

### RPC49-205

The RPC49-205 provides two segments for the installation of a FOUNDATION™ fieldbus network. In combination with the PSU-3214, each segment provides up to 500 mA with an output voltage of at least 27.5 V. The output voltage depends on the output current.

The conditioner can be supplied redundantly by two supply devices, whereby "POWER A" is the primary input. As long as no redundant voltage supply is available, the voltage supply should be connected to "POWER B". Should the voltage at "POWER A" drop below 20 V, input "POWER B" is energized.

The two green LEDs indicate power ON. The green active LEDs also indicate power ON. The two short-circuit protected outputs of the power conditioner switch off the output in case of overload ( $I > 500$  mA). The switch-off state is indicated by a red LED for each segment. The overload protection for the correspondent segment can be reset with two reset buttons.

Hardware diagnostics is provided via the monitor terminals. The power conditioner is equipped with an optional terminating resistor for the bus.

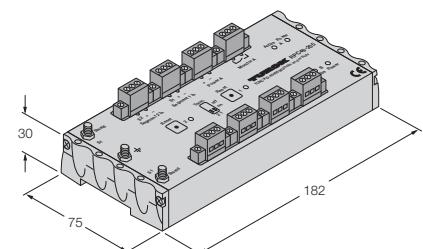

- Supply of 2 H1-segments, connection via removable screw terminals
- Aluminium rail housing
- Degree of protection IP20
- Connection of the housing potential via an M5 x 1 bolt
- Monitor function
- LEDs for indication of the operating status
- 2 x 500 mA output current
- Redundant power supply
- Short-circuit protected outputs

## Power supply single-channel PSU-3214

The power supply unit PSU-3214 supplies a power conditioner.

The device provides safety extra-low voltage (SELV) according to IEC/EN 60950. It features protection class II and corresponds to EMC class B.

The output voltage is 32 VDC with a maximum output current of 1.4 A. The overload protection is activated if the current exceeds 1.6 A.

Depending on the output current, the fieldbus segment is supplied with an output voltage of approx. 29 V which is provided in combination with the TURCK power conditioner RPC49-205.

Cable lengths of up to 1900 m in the Ex area can be achieved with the TURCK multibarrier MBD49-T415/Ex in combination with the power conditioner.

The green LED indicates operational readiness.

- **Output voltage 32 VDC**
- **Output current 1.4 A**
- **Safety extra low voltage SELV according to IEC/EN 60950**
- **Universal operating voltage (94...264 VAC)**

## FISCO Power Supply

### RPC49-10120EX

The intrinsically safe power supply RPC49-10120EX transmits the fieldbus signal from a host to an intrinsically safe fieldbus device in the Ex area, zone 2.

The RPC49-10120EX enables integrated transmission between the host and fieldbus connections and thus allows parallel connection of several devices in the fieldbus and accordingly a higher number of field devices in the segment.

Designed to operate in harsh environments and suitable for installation in zone 2, the TURCK power supply RPC49-10120EX expands the boundaries for fieldbus topologies.

The RPC49-10120EX provides up to 120 mA, powering field devices in Gas Group IIC. The device is mounted on DIN rail. It is

designed to exploit the very latest developments of the FISCO specification (Fieldbus Intrinsically Safe Concept) concerning the application in explosion hazardous areas. To reap the full potential of digital fieldbus communication without system inherent constraints is thus possible.

The excellent performance and flexibility of the RPC49-10120EX makes it easy to plan, install and mount fieldbus networks in compliance with the 31.25 kbit/s physical layer specification. Moreover, compatibility with the TURCK wiring components and accessories ensures high reliability, low installation costs and high operational safety.

Power supply to the host is procured via a switch making additional power sources redundant.

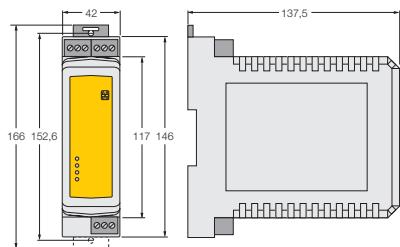

- **FISCO compliant according to IEC TS 60079-27**
- **Protection type: [EEx ib] IIC**
- **Mounting possible in zone 2**
- **FISCO power supply for FOUNDATION™ fieldbus**
- **Output current: 120 mA**
- **Fieldbus - Repeater**
- **Temperature range: -40 ...+70°C**

# FOUNDATION™ fieldbus

## Multibarrier MBD49-T415/Ex – Basics and application benefits

The operating principle of the **MBD49-T415/Ex** multibarrier is physically based on IEC 61158-2. The use of multibarriers increases the number of fieldbus stations in the FOUNDATION™ fieldbus network to a maximum of 32 field devices.

This high number of stations is achieved by enhanced safety of the fieldbus supply which can be looped through from multibarrier to multibarrier. The fieldbus stations in zone 0 are supplied with power via the four intrinsically safe outputs of each multibarrier device.

### User benefits

The user can expect substantial cost advantages due to the possibility of cascading the multibarriers in a single segment in the explosion hazardous area, thus fully exploiting the entire function range of the bus systems.

All fieldbus devices can be operated in a single fieldbus segment in the explosion hazard area. Thus, the costs for an additional bus coupler or a segment card as well as their integration and parameter definition are eliminated. An additional trunk line and the wiring material is also spared.

The supply of power to the multibarriers is implemented via the bus which means that an additional power cable is not required.

### Installation in the explosion hazardous area

The area of application to ATEX is II 2 (1 GD) G EEx m e [ia] IIC T4.

Due to its EEx e protection rating, the **MBD49-T415/Ex** multibarrier can be installed in zone 1 (II 2 G) according to 94/9/EC (ATEX 95a).

Use in explosion hazardous areas with explosion protection group IIC – in conjunction with temperature class T4 – is the standard in the process industry.

Within zone 1, the MBD49-T415/Ex is connected via a cable and connections with enhanced safety (EEx e) to the main line (trunk line) of a fieldbus conform to IEC 61158-2. This offers the advantage that the connection to the bus can be implemented using a loop isolator without EX approval, but with a sufficiently high capacity.

### Intrinsic safety and galvanic isolation between all outputs

For safety reasons, galvanic isolation of signals plays a decisive role in the Ex area. The multibarrier provides four intrinsically safe and galvanically isolated outputs. The complete galvanic isolation exists between the main bus cable (trunk line) **and** the output circuits as well as between all of the four individual output circuits.

Galvanic isolation of intrinsically safe circuits, as demanded by the industry, in particular for zone 0, is thus provided.

Potential transfers and potential equalization currents are thus reduced and safe data transmission is guaranteed.

### Operational safety

Operational safety of the bus system must be guaranteed should a bus station fail or malfunction. The four outputs of the multibarrier each supply an output current of max. 40 mA.

If a short-circuit occurs on a fieldbus station, the integrated short-circuit protection comes into play. Only the affected output will be shut down, the main line and the other outputs of the fieldbus segment remain operational. The short-circuit is indicated for each channel by a red LED inside the housing.

### Industrially suitable housing

Industrial environmental conditions are frequently harsh and aggressive. Therefore, a housing suitable for these conditions is necessary. The enhanced IP66 degree of protection and the special housing material (die-cast aluminium) – in conjunction with the encapsulated module electronics – meet these demands and provide a high level of operational safety. Direct installation of a multibarrier in the system is thus unproblematic.

The EEx e cable glands guarantee safe and quick connection technology in conjunction with the high-quality cage clamps.

Shield terminals are capacitively connected to the housing potential in order to divert possible interference voltages on the cable shield. The riveted ground bolt connects the housing to the main potential equalization.

### Functions which supplement the standard

- **FISCO conformity**

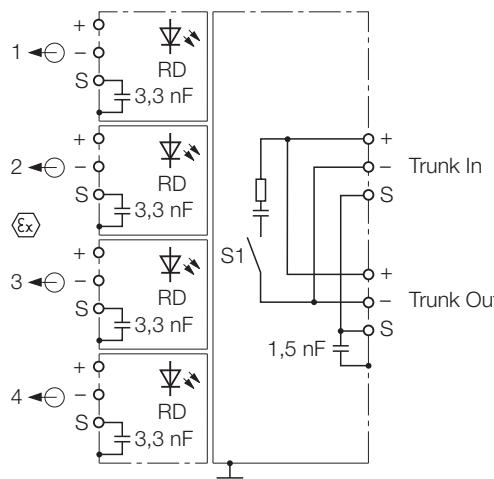

The FISCO model has been developed for the supply of power to fieldbus stations in the Ex area by the PTB in cooperation with renowned manufacturers. FISCO stands for Fieldbus Intrinsically Safe Concept. It is intended to simplify the verification of intrinsic safety of fieldbus systems. Intrinsically safe networks can be configured without highly complex calculations, and also expanded and operated without system certification. The outputs of the multibarrier are conform to the demands of an Ex current supply and also conform to FISCO.

- **Switch-in terminating resistors**

Data transmission on bus cables is frequently influenced by signal reflection, which can occur when the bus ends are not terminated. The fieldbus must be provided with a terminating resistor at both ends in order to avoid signal reflection. The multibarrier is provided with an integrated terminating resistor, which should be activated, when the multibarrier is connected as the last device on the main bus line (trunk line).

- **Climatic compensation**

In regions subject to large temperature and air-humidity variations, it is possible that formation of condensation or a build-up of water within the housing is possible during operation. In order to avoid this, the multibarrier is fitted on the cable connection end with a pressure equalization element to avoid the build-up of condensation. The pressure equalisation element features IP67 degree of protection and guarantees continuous and reliable ventilation and venting of the multibarriers. The ePTFE diaphragm in the centre of the gland features a very high water ingress pressure and repels oil. Even 100 % of salt crystals are kept out.

**FOUNDATION™ fieldbus****Multibarrier, 4-port****MBD49-T415/EX**

The 4-port multibarrier MBD49-T415/EX enables the connection of a large number of field devices to one fieldbus in the Ex-area, according to IEC 61158-2.

The number of field devices to be connected to the multibarrier depends on the current consumption of the individual devices. Up to 32 EEx i field devices can be connected to the bus. The number of slaves can be extended by the EEx e fieldbus supply which can be looped through from multibarrier to multibarrier.

Inputs and outputs of the trunk line feature increased safety protection (EEx e) and the outputs to the field devices are intrinsically safe (EEx i).

The multibarrier is equipped with an selectable bus terminating resistor. This switch is integrated in the housing on the board.

The multibarrier is equipped with four LEDs located on the printed circuit board inside the housing to provide short-circuit indications separately for each channel.

Because of complete galvanic isolation of the

- trunk line to EEx i outputs and between the
  - EEx i outputs,
- safe operation is guaranteed.

- Entity and FISCO compliant according to IEC TS 60079-27
- Galvanic isolation between the EEx i outputs and the EEx e bus line, as well as between the EEx i outputs
- Powder-coated die-cast aluminium housing
- Pressure compensation element for protection against condensation water
- Connection of the housing potential via an M5 x 1 bolt
- Temperature range: -20...+70 °C (-4...+158 °F)
- Integrated terminating resistor (switch-in)
- Cable shielding: capacitive connection to housing potential
- Output data: 10 V/40 mA (short-circuit proof)

## Fieldbus display, 3-port

### FD-49-T317/EX

The 3-port digital indicator FD-49-T317/EX displays the process information of the fieldbus nodes of a FOUNDATION™ fieldbus network.

The device (listener) receives and displays the values of the adjusted fieldbus addresses. Parameterization is code word protected and implemented via a keypad on the front side. Adjustments can be done for each port separately. The process value of the actuator/sensor is displayed as a 5-digit number and the process value status is displayed via limit value markers.

Apart from a measuring value indicator, the display contains a 41-segment bargraph for trend monitoring, which can be scaled separately from the display value.

The FD-49-T317/EX performs as a "listener", i.e. initialization by the host is not required (integration via software redundant) and does not appear in the network as a node with an own address.

The device is supplied with energy by the fieldbus ( $\leq 10$  mA) and can be applied in Ex areas up to temperatures of the class T6.

- Entity and FISCO compliant according to IEC TS 60079-27
- Digital fieldbus display for the indication of process values
- Powder-coated die-cast aluminium housing
- Connection of the housing potential via external earthing

## **FOUNDATION™ fieldbus**

TURCK offers junctions in various designs for the distribution of energy and data.

The junctions differ in the number of ports, the housing style and special features such as integrated short-circuit protection, switch-in terminating resistor and selectable shielding concept.

The following junctions are available as standard versions.

Special solutions are available on request.

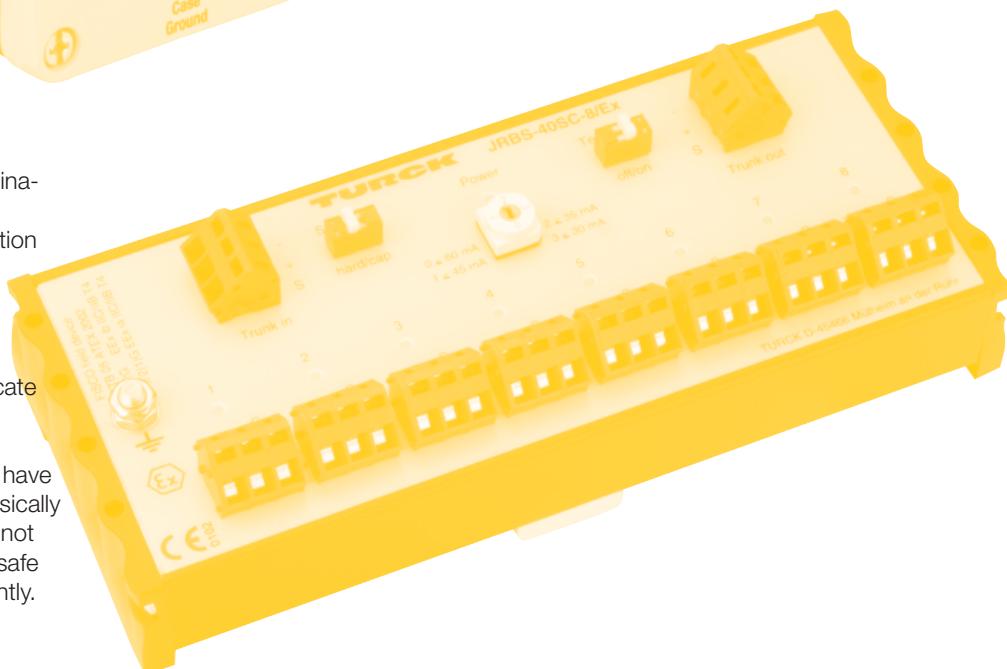

#### **IP67 T-pieces and junction boxes with or without short-circuit protection (1, 4 and 6 ports)**

- Explosion-protected junctions (for use in zone 1 or 2, distribution of EEx ia signals in zone 0)
- Standard junctions (non-Ex)
- IP67 degree of protection
- Switch-in terminating resistor
- Selectable shielding concept (hard-wired or capacitive grounding)
- Active and passive types
- Pressure compensation element to prevent water condensation
- Housing material: powder-coated die-cast aluminium (4 and 6-port type)
- Connection technology: stainless steel flange connectors 7/8", M12 or cage-clamp terminals
- Cable glands: plastic, stainless steel, nickel-plated brass, EMC
- Temperature range: -25°C ... +70°C

#### **IP20 junction boxes with or without short-circuit protection (4, 6, 8 and 12 ports)**

- Suitable for the explosion hazardous and the safe area
- For use in zone 1 or 2, distribution of EEx ia signals in zone 0
- IP20 degree of protection
- Switch-in terminating resistor
- Selectable shielding concept (hard-wired or capacitive grounding)
- Active and passive types
- Housing material: aluminium
- Connection technology: cage-clamp terminals or removable screw terminals
- Temperature range: -40°C ...+70°C

**4**

#### **CAUTION**

##### **Explosion Danger!**

The EC type test examination certificate and the manufacturer's declaration of conformity must be observed.

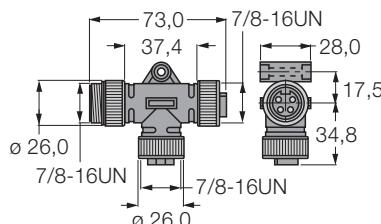

It is essential that the "special conditions" in the EU type test certificate are observed.

Junction boxes, which have been used in non intrinsically safe applications, may not be used in intrinsically safe applications subsequently.

## IP67 junction box, 4-port

### JBBS-49SC-T415/3G

The 4-port Ex-junction module JBBS-49SC-T415/3G is designed for FOUNDATION™ fieldbus systems.

The junction box features an adjustable short-circuit limit. The max. current limitation is selected for all ports via a rotary switch. The following values can be selected: 30, 35, 45 and 60 mA.

The housing is made of robust die-cast aluminium and features protection degree IP67.

The junction box is equipped with a selectable bus terminating resistor. The according switch is integrated in the housing on

the board.

To avoid condensation build-up in the housing, the devices are equipped with a condensate drain.

The shield is capacitively coupled to the housing potential. A switch for direct coupling of the shield and housing is implemented.

**Attention:** Sufficient equipotential bonding of the installation must be ensured. The device is connected via the bolt of the housing to the system's potentializer.

- Entity and FNICO compliant according to IEC TS 60079-27
- Mounting possible in zone 2
- Junction box for wall mounting with PVC cable glands M20 x 1.5
- Powder-coated die-cast aluminium housing
- Pressure compensation element for protection against condensation water
- Connection of the housing potential via an M5 x 1 bolt
- Short-circuit protection per drop line/spur
- For Ex applications: -25...+70 °C (-13...+158 °F); for non-Ex applications: -40...+70 °C (-40...+158 °F)
- Integrated terminating resistor (switch-in)
- Cable shielding: capacitive or direct connection to housing potential selectable via switch
- Isolated support terminal for optional protective conductor incorporated in cable

## IP67 junction box, 4-port

### JBBS-49SC-E413/EX

The 4-port Ex-junction module JBBS-49SC-E413/EX is designed for FOUNDATION™ fieldbus systems.

The junction box features an adjustable short-circuit limit. The max. current limitation is selected for all ports via a rotary switch. The following values can be selected: 30, 35, 45 and 60 mA.

The housing is made of robust die-cast aluminium and features protection degree IP67.

The junction box is equipped with a selectable bus terminating resistor. The according switch is integrated in the housing on

the board.

To avoid condensation build-up in the housing, the devices are equipped with a condensate drain.

The shield is capacitively coupled to the housing potential. A switch for direct coupling of the shield and housing is implemented.

**Attention:** Sufficient equipotential bonding of the installation must be ensured. The device is connected via the bolt of the housing to the system's potentializer.

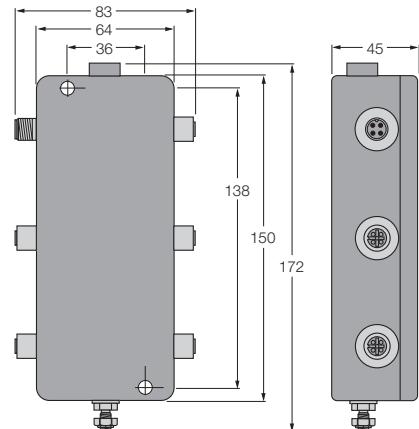

- Entity and FISCO compliant according to IEC TS 60079-27
- Junction box for wall mounting with stainless steel M12 flange connections
- Powder-coated die-cast aluminium housing
- Pressure compensation element for protection against condensation water
- Connection of the housing potential via an M5 x 1 bolt
- Short-circuit protection per drop line/spur
- For Ex applications: -25...+70 °C (-13...+158 °F); for non-Ex applications: -40...+70 °C (-40...+158 °F)
- Integrated terminating resistor (switch-in)
- Cable shielding: capacitive or direct connection to housing potential selectable via switch
- Isolated support terminal for optional protective conductor incorporated in cable

## IP67 junction box, 4-port

### JBBS-49-M413/3G

The 4-port Ex-junction module JBBS-49-M413/3G is designed for FOUNDATION™ fieldbus systems.

The housing is made of robust die-cast aluminium and features protection degree IP67.

The junction box is equipped with a selectable bus terminating resistor. The according switch is integrated in the housing on the board.

To avoid condensation build-up in the housing, the devices are equipped with a condensate drain.

The shield is capacitively coupled to the housing potential. A switch for direct coupling of the shield and housing is implemented.

**Attention:** Sufficient equipotential bonding of the installation must be ensured. The device is connected via the bolt of the housing to the system's potentializer.

- Entity and FNICO compliant according to IEC TS 6007927
- Mounting possible in zone 2
- Junction box for wall mounting with stainless steel 7/8" flange connections
- Powder-coated die-cast aluminium housing
- Pressure compensation element for protection against condensation water
- Connection of the housing potential via an M5 x 1 bolt
- For Ex applications: -25...+70 °C (-13...+158 °F); for non-Ex applications: -40...+70 °C (-40...+158 °F)
- Integrated terminating resistor (switch-in)
- Cable shielding: capacitive or direct connection to housing potential selectable via switch
- Isolated support terminal for optional protective conductor incorporated in cable

— 7/8" Segment in

— 7/8" Segment out, Spur

nominal values: 9 A, 300 V

**FOUNDATION™ fieldbus and PROFIBUS-PA****IP20 junction box, 4-port****JRBS-40SC-4C/EX**

The 4-port Ex junction box JRBS-40SC-4C/EX is designed for fieldbus systems according to IEC 61158-2, i.e. it is suited for both PROFIBUS PA and FOUNDATION™ fieldbus.

The junction box features an adjustable short-circuit limit. The max. current limitation is selected for all ports via a rotary switch. The following values can be selected: 30, 35, 45 and 60 mA.

The housing is made of aluminium and features protection degree IP20.

The junction box is equipped with a selectable bus terminating resistor. The according switch is integrated in the housing on

the board.

The shield is capacitively coupled to the housing potential. A switch for direct coupling of the shield and housing is implemented.

**Attention:** Sufficient equipotential bonding of the installation must be ensured. The device is connected via the bolt of the housing to the system's potentializer.

**Accessories:** To increase the degree of protection, there are various aluminium and stainless steel housings with IP6x rating and various cable glands available on request.

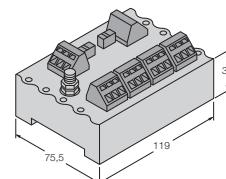

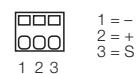

- Entity and FISCO compliant according to IEC TS 60079-27
- Junction box for DIN rail mounting
- Aluminium housing
- Short-circuit protection per drop line/spur
- For Ex applications: -25...+70 °C (-13...+158 °F); for non-Ex applications: -40...+70 °C (-40...+158 °F)
- Switch-in terminating resistor
- Cable shielding: Capacitive or direct connection with housing potential selectable via switch

Connection mode	snap-on DIN rail (EN 60715)

**Dimensions****Terminal Configuration**

**FOUNDATION™ fieldbus und PROFIBUS-PA****IP20 junction box, 12-port****JRBS-40SC-12R/EX**

The 12-port Ex junction box JRBS-40SC-12R/EX is designed for fieldbus systems according to IEC 61158-2, i.e. it is suited for both PROFIBUS PA and FOUNDATION™ fieldbus.

The junction box features an adjustable short-circuit limit. The max. current limitation is selected for all ports via a rotary switch. The following values can be selected: 30, 35, 45 and 60 mA.

The housing is made of aluminium and features protection degree IP20.

The junction box is equipped with a selectable bus terminating resistor. The according switch is integrated in the housing on

the board.

The shield is capacitively coupled to the housing potential. A switch for direct coupling of the shield and housing is implemented.

**Attention:** Sufficient equipotential bonding of the installation must be ensured. The device is connected via the bolt of the housing to the system's potentializer.

**Accessories:** To increase the degree of protection, there are various aluminium and stainless steel housings with IP6x rating and various cable glands available on request.

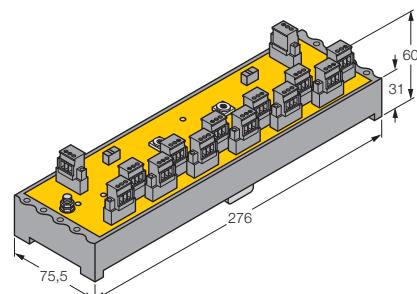

- Entity and FISCO compliant according to IEC TS 60079-27
- Junction box for DIN rail mounting
- Aluminium housing
- Short-circuit protection per drop line/spur
- For Ex applications: -25...+70 °C (-13...+158 °F); for non-Ex applications: -40...+70 °C (-40...+158 °F)
- Switch-in terminating resistor
- Cable shielding: Capacitive or direct connection with housing potential selectable via switch

Housing material	aluminium
Housing color	black
Dimensions	142 x 31 x 75.5 mm
Connection mode	snap-on DIN rail (EN 60715)

**Dimensions****Terminal Configuration**

**FOUNDATION™ fieldbus und PROFIBUS-PA****IP20 junction box, 8-port****JRBS-40-8R/EX**

The 8-port Ex junction box RBS-40-8R/EX is designed for fieldbus systems according to IEC 61158-2, i.e. it is suited for both PROFIBUS PA and FOUNDATION™ fieldbus.

The housing is made of aluminium and features protection degree IP20.

The junction box is equipped with a selectable bus terminating resistor. The according switch is integrated in the housing on the board.

The shield is capacitively coupled to the housing potential. A switch for direct coupling of the shield and housing is implemented.

**Attention:** Sufficient equipotential bonding of the installation must be ensured. The device is connected via the bolt of the housing to the system's potentializer.

**Accessories:** To increase the degree of protection, there are various aluminium and stainless steel housings with IP6x rating and various cable glands available on request.

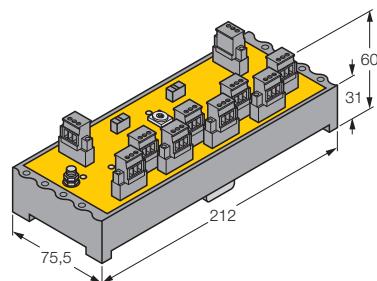

- Entity and FISCO compliant according to IEC TS 60079-27
- Junction box for DIN rail mounting
- Aluminium housing
- For Ex applications: -25...+70 °C (-13...+158 °F); for non-Ex applications: -40...+70 °C (-40...+158 °F)
- Switch-in terminating resistor
- Cable shielding: Capacitive or direct connection with housing potential selectable via switch

**Dimensions****Terminal Configuration**

# FOUNDATION™ fieldbus

## Cable technology – Basics

A two or three wire cable is prescribed by IEC 61158-2 as the transmission medium for transmission energy and data.

### Cable parameters

Electrical data and permissible cable types are not prescribed. Cable parameters determine the achievable fieldbus properties such as the distances to be covered, number of connectable stations and electromagnetic compatibility.

In the following table (Tab. 1) we compare the four standard cable types (at 25 °C):

	Type A (Reference)	Type B	Type C	Type D
<b>Cable design</b>	Twisted conductor pair	One or multiple twisted conductor pairs, overall shield	Multiple twisted pairs, not shielded	Multiple non-twisted pairs not shielded
<b>Conductor cross-section (nominal)</b>	0.8 mm <sup>2</sup> (AWG 18)	0.32 mm <sup>2</sup> (AWG 22)	0.13 mm <sup>2</sup> (AWG 26)	1.25 mm <sup>2</sup> (AWG 16)
<b>Loop impedance (DC current)</b>	44 Ω/km	112 Ω/km	264 Ω/km	40 Ω/km
<b>Wave resistance at 31.25 kHz</b>	100 Ω ± 20 %	100 Ω ± 30 %	not specified	not specified
<b>Wave attenuation at 39 kHz</b>	3 dB/km	5 dB/km	8 dB/km	8 dB/km
<b>Capacitive asymmetry</b>	2 nF/km	2 nF/km	not specified	not specified
<b>Group delay distortion (7,9...39 kHz)</b>	1.7 µs/km	not specified	not specified	not specified
<b>Degree of shield coverage</b>	90 %	not specified	not specified	not specified
<b>Recommended network expansion (incl. spur lines)</b>	1900 m	1200 m	400 m	200 m

Tab. 1 Cable types to IEC 61158-2

### Use of the individual cable types

Cables conforming to the minimum requirements of type A, should be used for new installations. Cable types C and D should only be used in so-called "Retrofit Applications" (usage of cable already installed) involving only very limited network extensions. It is necessary to consider that in these cases the immunity to interference during data transmission may not meet the demands described in the standard.

the types and limit values listed in Tab. 1, but its particularly suitable for FOUNDATION™ fieldbus and PROFIBUS-PA fieldbus systems. All of TURCK's cables for fieldbuses compliant with IEC 61158-2 feature optimum quality even exceeding type A requirements.

### Maximum cable lengths, spur lines

Each fieldbus installation must follow a defined set of rules, the "Network configuration rules" (see IEC 61158-2, Chap. 11.2.2). The following limit values for permissible attenuation, reflection and distortion (rule 8), as well as the maximum signal delay (rule 4) are listed (see Tab. 2).

Attenuation between any two bus interfaces (at 31.25 kHz)	10.5 dB
Attenuation distortion a (f = 39 kHz) – a (f = 7.8 kHz), monotonic increasing with frequency	6 dB
Reflection factor at any point (7.8...39 kHz)	0.2
Signal delay between any two bus interfaces	640 µs

Tab. 2 Limit values for attenuation, distortion, reflection and propagation delay

## Topology

If the limit values listed on the previous page are taken into consideration, various topologies such as star, tree or linear structures, as well as every cable is permissible.

An individual calculation of the four variables listed in Tab. 2 for all possible connections between two bus interfaces is associated with a very high effort. It is advisable to define rules which set down an optimum basic topology. These rules should ensure that the limit values stated cannot be exceeded.

The basis for a network should be a tree or linear topology or a combination of both.

A network of this type consists of a main cable (trunk line), a number of spur lines (spur), connection elements (connectors or junction boxes) and a terminating resistor (see Fig. 1).

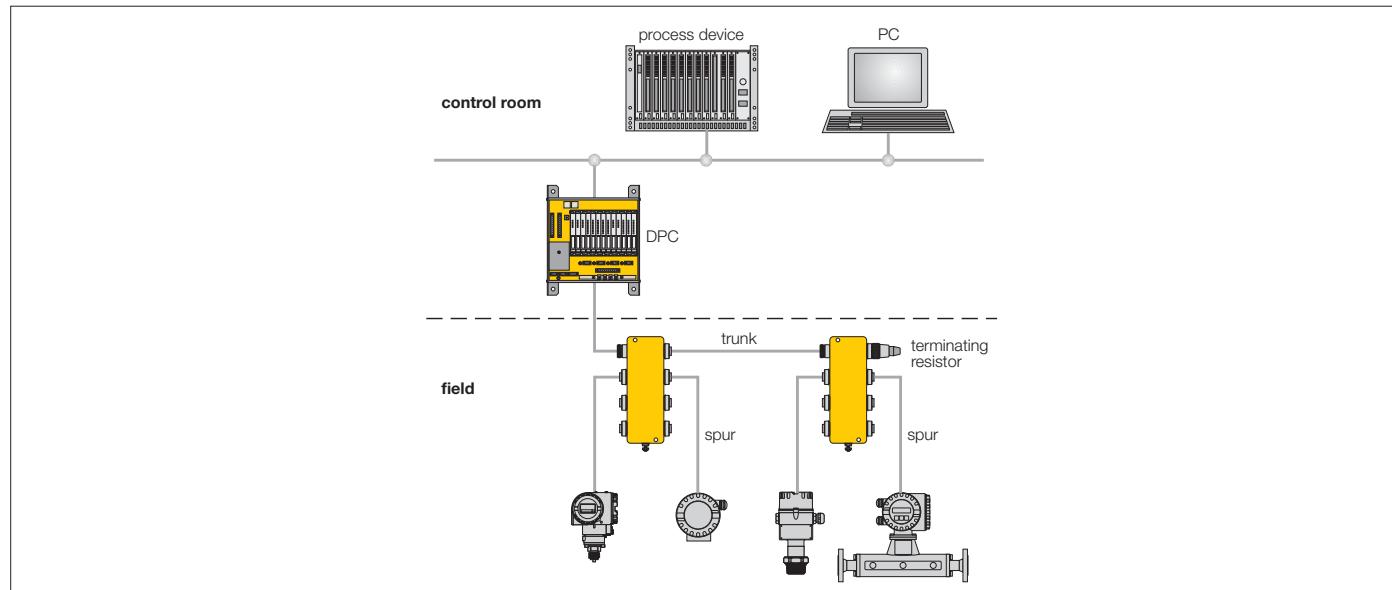

Fig. 1 Network topology

## Maximum cable lengths

The sum of main cable lengths and all spur line lengths results in the overall cable length, as already defined in Tab. 1 as the network expansion (see Tab. 3).

Cable	Max. cable lengths (incl. spur lines)
Type A	1900 m
Type B	1200 m
Type C	400 m
Type D	200 m

Tab. 3 Maximum cable lengths (main cable and spur lines)

## Maximum spur cable lengths

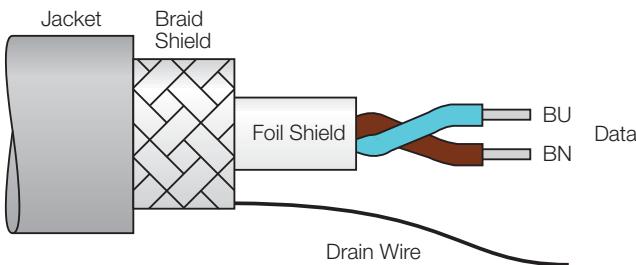

The maximum spur cable length depends on the number of field devices per spur line and is listed in Tab. 4.

Number of devices	1 device per spur line	2 devices per spur line	3 devices per spur line	4 devices per spur line
25...32	1 m	1 m	1 m	1 m
19...24	30 m	1 m	1 m	1 m
15...18	60 m	30 m	1 m	1 m
13...14	90 m	60 m	30 m	1 m
1...12	120 m	90 m	60 m	30 m

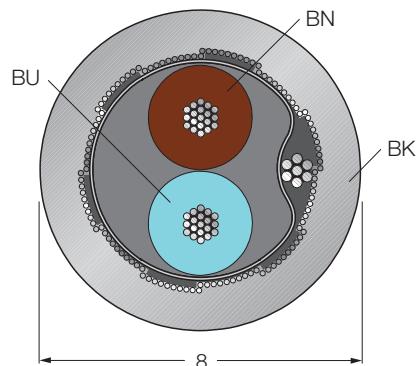

Tab. 4 Maximum spur line lengths

**Fieldbus cables for fieldbus systems**

According to IEC61158-2

**CABLE FBY-.../SD-...M**

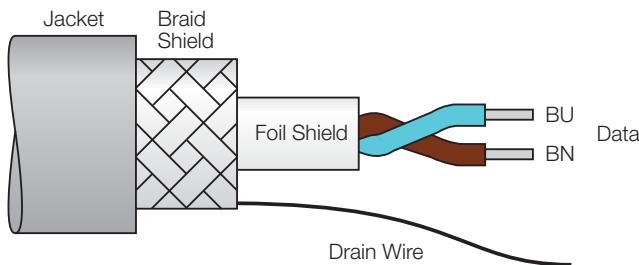

- Fieldbus cables, type A, IEC 61158-2
- PVC cable jacket, colour blue, black, yellow or orange
- Oil, gas and sunlight resistant
- Temperature range -40... +75 °C
- Cable conductor cross section: 18/7 AWG (0.8 mm<sup>2</sup>)

**Conductor cross-section**

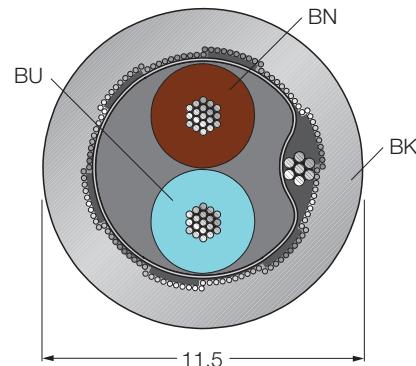

<b>Type</b>	CABLE FBY-.../SD-...M
Ident-No.	depending on length and colour, Ident-No. on request
<b>Cable</b>	
Cable jacket	18/7 AWG (0.8 mm <sup>2</sup> ), stranded plain copper PVC (blue, black, yellow or orange)
Shield	aluminium foil, tinned copper braid and stranded filler litz wire
Max. tensile strength	≤ 90 N
Bending radius	minimum 5 x cable diameter
Core insulation material	PE-foam with PE-casing
Core insulation colours	BN, BU
Core cross-section	2 x 0.8 mm <sup>2</sup>
DC resistance (loop)	43.6 Ω/km
Shield resistance	nom. 9 Ω/km
Nom. Impedance	100 ± 20 (31.25 kBit/s) Ω
Working capacitance	nom. 60 nF/km
Capacitive earthing	max. 2 nF/km
Dampening	max. 3.0 dB/km (with f = 39 kHz)
Skew	max. 1.7 µs/km (7.9 kHz -39 kHz)
Inductivity	nom. 0.7 mH/km
<b>Rated voltage</b>	max. 300 V
Ambient temperature	
At rest	-40... + 75 °C
In moving state	-5... + 50 °C
Approvals	UL
UV resistance	according to UL 1581, section 1200
Resistance to oil	according to ICEA S82-552
Flame retardant	according to IEC 60332

**Fieldbus cables for fieldbus systems**

According to IEC61158-2

**CABLE FBY-BK/LD-...M**

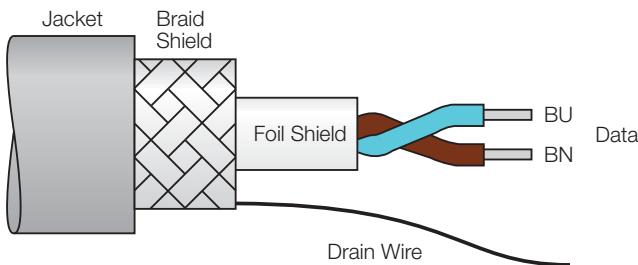

- Long-distance fieldbus cables, type A, acc.IEC 61158-2
- PVC cable jacket, colour black
- Oil, gas and sunlight resistant
- Temperature range -40... +75 °C
- Cable conductor cross section: 14/7AWG (2.1 mm<sup>2</sup>)

**Conductor cross-section**

<b>Type</b>	CABLE FBY-BK/LD-...M
Ident-No.	depending on the length, Ident-No. on request
<b>Cable</b>	14/7 AWG (2.1 mm <sup>2</sup> ), stranded plain copper

# Fieldbus cables for fieldbus systems

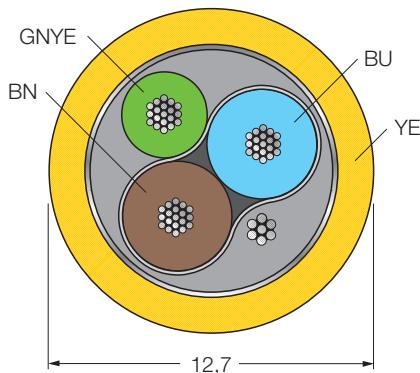

According to IEC 61158-2

Cable 492A-...M, 492BA-...M

- Fieldbus cables, type A, IEC 61158-2
- Suitable for harsh environmental conditions
- Aluminium armouring
- Suitable for 7/8" male connector
- UV resistant
- Temperature range -40...+75 °C
- Cable conductor cross section 18/7 AWG (0.8 mm<sup>2</sup>)
- Cable 492A with yellow cable jacket
- Cable 492BA with blue cable jacket

## Conductor cross-section

### Type designation and Ident-No.

Type Cable 492A-...M	depending on the length, Ident-No. on request
Type Cable 492BA-...M	depending on the length, Ident-No. on request

### Cable

Insulation	18/7 AWG (0.8 mm <sup>2</sup> ), stranded bare copper
Color code	XLPE foam
Shield	A-conductor: brown; B-conductor: blue; ground: green/yellow
Jacket	aluminium foil, metallic external surface with contact to the tinned copper braid and stranded drain wire
Armoured	Polyvinyl chloride (PVC)
Overall diameter	Aluminium approx. 12.7 mm

### Physical properties/ fire resistance

Minimum bending radius	once: 40 mm/repeated: 60 mm
Ambient temperature	
At rest	-40 ... +75 °C
In moving state	-5 ... +50 °C
UV resistance	conform to UL 1581, section 1200
Flame retardant	PLTC cable, flame resistant conform to CSA-FT4

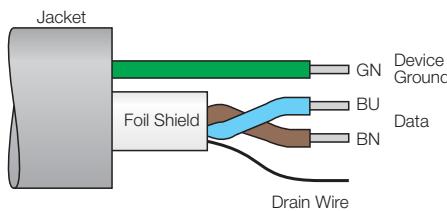

### Electrical properties at 20° C

Inductance	max. 0.44 mH/km
Total capacitance	max. 52.43 nF/km
Impedance (at 31.25 kBit/s)	100 Ω /± 20 Ω
DC resistance	2 x 21.3 Ω/Km
High voltage test (conductor/conductor and conductor/shield)	1500 V
Operational voltage	max. 300 V

# Fieldbus cables for fieldbus systems

## According to IEC 61158-2

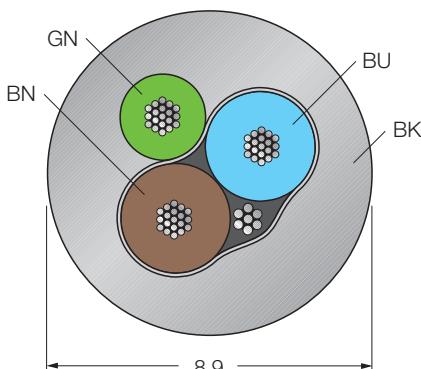

### Cable FB4910-BK...M

- Fieldbus cables, type A, IEC 61158-2
- Special cable for FOUNDATION fieldbus™
- Area of application:
  - offshore
  - extremely cold regions
  - tropical regions
- Resistant to oil, gases and sunlight
- Excellent tensile strength and abrasion resistance
- Highly flame resistant conform to IEEE 1202/FT4 and IEC 332-3, category A
- Temperature range -50..+90 °C
- Cable conductor cross section 18/7 AWG (0.8 mm²)
- Approvals
  - UL 1309 (Marine Shipboard) and CSA 222 No. 245

<b>Type</b>	Cable FB4910-BK...M
Ident-No.	depending on the length, Ident-No. on request
<b>Cable</b>	18/7 AWG (0.8 mm²), stranded bare copper
Insulation	XLPE foam
Color code	A-conductor: brown; B-conductor: blue; ground: green
Shield	aluminium foil, metallic external surface with contact to the tinned copper braid and stranded drain wire
Jacket	TPE
Overall diameter	approx. 8.9 mm
<b>Physical properties/fire resistance</b>	
Minimum bending radius	once: 40 mm/repeated: 60 mm
Ambient temperature	
At rest	-40 ... +90 °C
In moving state	-50 ... +50 °C
UV resistance	conform to UL 1581, section 1200
Resistance to oils	conform to ICEA S61-402
Flame resistance	conform to IEC 60332
<b>Electrical properties at 20° C</b>	
Inductance	max. 0.44 mH/km
Total capacitance	max. 52.43 nF/km
Impedance (at 31.25 kBit/s)	100 Ω /± 20 Ω
DC resistance	2 x 21.3 Ω/Km
High voltage test (conductor/conductor and conductor/shield)	1500 V
Operational voltage	max. 300 V

#### Conductor cross-section

# **JUST IN TIME!**

Ideally the length of the cord set is adjusted according to the requirements of the plant. For this reason TURCK now offers a Just-in-Time-delivery service (JIT) for premoulded cables.

## **The new JIT-5D-Programme for perfect connections:**

- Just-in-Time delivery within 5 days only
- Free choice of cable length
- Premoulded fieldbus and power cables
- High flexibility with respect to planning and mounting of your application
- High cost savings

**Delivery  
3 workdays after  
ordering**

**Ordering until  
12 p.m.**

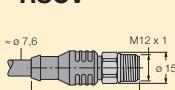

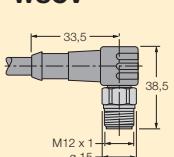

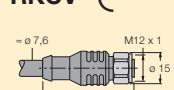

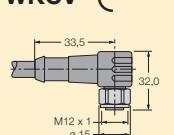

**Production**

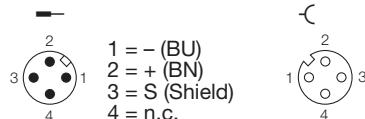

**Arrival  
at the  
customer**

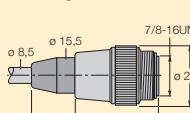

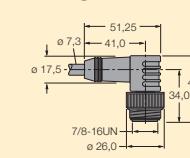

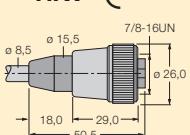

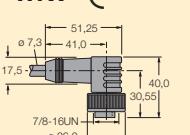

**1.  
Workday**

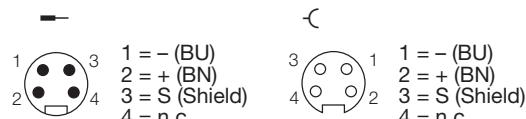

**5.  
Workday\***

\* valid for deliveries  
within the European Union (EU)

## Accessories for fieldbus systems

## Flange connector

## RSFV49

- Version: male 7/8" connector
- 1/2-14 NPT screw-in thread
- Stainless steel flange housing
- 4-pole, solderable
- For FOUNDATION™ fieldbus applications

## FOUNDATION™ fieldbus connection

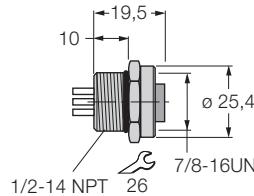

<b>Type</b>	RSFV49
Ident-No.	6602199
<b>Connector</b>	Male flange connector, 7/8"
Polarity	4-pole
Contacts	metal, CuZn, gold-plated
Contact carriers	plastic, PUR, black
Screw-in thread seal	NBR
Flange housing	stainless steel, 1.4401 (316)
Degree of protection	IP67, only with screws tightened
Screw-in thread	1/2-14 NPT
Mechanical lifespan	min. 100 Contact durability
Pollution degree	3
<b>Rated voltage</b>	max. 600 V
Insulation resistance	$\geq 10^9 \Omega$
Ampacity	9 A
Forward resistance	$\leq 5 \text{ m}\Omega$
Ambient temperature Connector	-40 ... + 105 °C

**Type** BKV8140-0/9  
Ident-No. 6914538

<b>Connector</b>	field-wireable female connector, M12 x 1, straight
Polarity	4-pole
Contacts	metal, CuZn,CuSnZn, Optalloy coated
Contact carriers	plastic, PA, black
Grip	plastic, PA, black
Coupling nut/screw	stainless steel, 1.4404
Seal	plastic, FKM/FPM
Screw-in thread seal	plastic, NBR
Degree of protection	IP67, only with screws tightened
External diameter of the cable	4 ... 8 mm
Core cross-section/Clamping ability	0.14... 0.75 mm <sup>2</sup>
Screw-in thread	PG 9
Connection mode	Screw terminals
Pollution degree	3

<b>Rated voltage</b>	max. 250 V
Insulation resistance	$\geq 10^9 \Omega$
Ampacity	4 A
Forward resistance	$\leq 5 \text{ m}\Omega$
Ambient temperature Connector	-25 ... + 90 °C

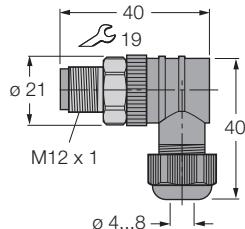

- Version: female M12 connector
- Field-wireable
- 4-pole, straight, stainless steel coupling nut
- Cable exit 4.0 ... 8.0 mm
- For use in PROFIBUS-PA and FOUNDATION™ fieldbus applications

**PROFIBUS-PA connection****FOUNDATION™ fieldbus connection**

# FOUNDATION™ fieldbus

## Bus termination resistors

Data transmission on bus cables is frequently influenced by signal reflection, which can occur when the bus ends are not terminated.

The fieldbus must be provided with a termination resistor at both ends in order to avoid signal reflection.

TURCK offers plug-in termination resistors, type M12 × 1 and 7/8", for intrinsically safe and non-intrinsically safe circuits.

### Specification

Connector

Coupling nut

Protection degree (IEC 60529/EN 60529)

Max. ratings

– RSV49-TR, RSEV49-TR

– RSV-49-TR-Ex

PUR housing material and contact carriers, oil resistant, 300 V rating

stainless steel

IP67 and NEMA 1, 3, 4, 6P

$U_{max} = 50$  VDC

$T_a = -40...+80$  °C

$U_i = 25$  VDC,  $I_i = 250$  mA,  $P_i = 1.2$  W

$T_a = -40...70$  °C (EEx ia IIC T4)

$-40...40$  °C (EEx ia IIC T6)

### Use of the intrinsically-safe version

The intrinsically-safe fieldbus termination resistors feature protection class "intrinsic safety" and may be used in the explosion hazardous area category 1 G (zone 0), 2 G (zone 1) or 3 G (zone 2).

In zone 0 the power supply circuit must conform to protection class "ia".

The RS-49-TR-Ex termination resistor can be used in networks, which are designed conform to the FISCO model.

### CAUTION

The EC type test examination certificate and the manufacturer's declaration of conformity must be observed.  
It is essential that the "special conditions" in the EU type test examination certificate are observed.

### NOTE

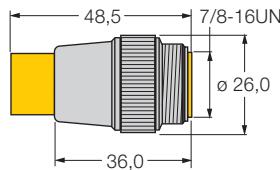

The TURCK JBBS... junctions to IP67 (4 and 6 ports) and JRBS... to IP20 are already provided with integrated switch-in bus termination resistors.  
Special versions excepted.

### IP67 stainless steel housing

#### EG-VA2020/BV67-T105

The stainless steel housing EG-VA2020/BV67-T105 is suited for the integration of TURCK junction boxes JRBS-...

The robust model is especially suited for rough and aggressive environmental conditions.

Inside the housing a hat rail is located used for retaining a 4, 6 or 8 port JRBS junction box with a maximum width of 180 mm.

The connection of the cables is attained

with ten M20 x 1.5-cable glands.

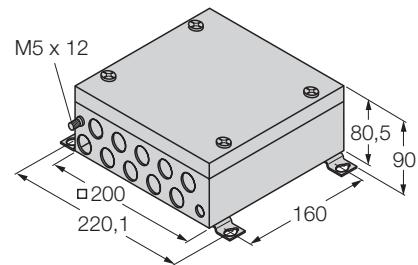

With a pressure compensation element (Protection degree IP67) a continuous and reliable ventilation is ensured. This way condensation and accumulation of water is avoided.

**Note:** Ensure sufficient equipotential bonding of the installation. The housing is connected to the equipotential bond via an M5 x 1 connector.

- **Stainless steel housing to accommodate the TURCK IP20 junction modules**
- **Protection degree IP67 (IEC/EN 60529)**
- **10 plastic cable glands M20 x 1.5 for cable guides**
- **Insulated shield terminals**
- **Wall mounting**
- **Pressure compensation element**
- **Connection of the housing potential via an M5 x 1 bolt**

**Accessories for fieldbus systems****IP67 stainless steel housing****EG-VA2020/BV67-T105**

<b>Type</b>	EG-VA2020/BV67-T105
