     Solution for COVID-19

Cordless Occupancy Monitoring Solution for COVID-19
Let us help you create a safe environment

Benefits

- Remote controlled self-contained unit

- No Installation

- Maximise your occupancy

- Able to change with guidelines

- Cost effective solution

- Minimise customer disruption

- Customisable options for all business sizes

The Challenge

To minimise the disruption for customers and maximise throughput while creating a safe environment is essential to doing business. To potentially reduce excessive queues, which can be off-putting to customers, while complying with government guidelines.

The Solution

Our simple plug and play package allows you to create a safe environment whilst minimising queueing. This can remove the negative impressions customers may have when seeing an excessive queue, and improve the overall customer experience.

The package requires no installation, and is battery powered giving you flexibility on where to locate the unit. To recharge the batteries simply plug the unit in at close of business, ready for use the following day.

Our lights are readily understood by customers, as they are similar to traffic lights. The reliable package is ideal for SMEs to monitor occupancy and maintain a safe environment.

Our solutions are scalable and can be automated for larger premises. Support social distancing, maximise your throughput and let us help you create a safe environment.

Cordless Occupancy Monitoring Solution

Self-contained   Battery Powered   Remote Controlled

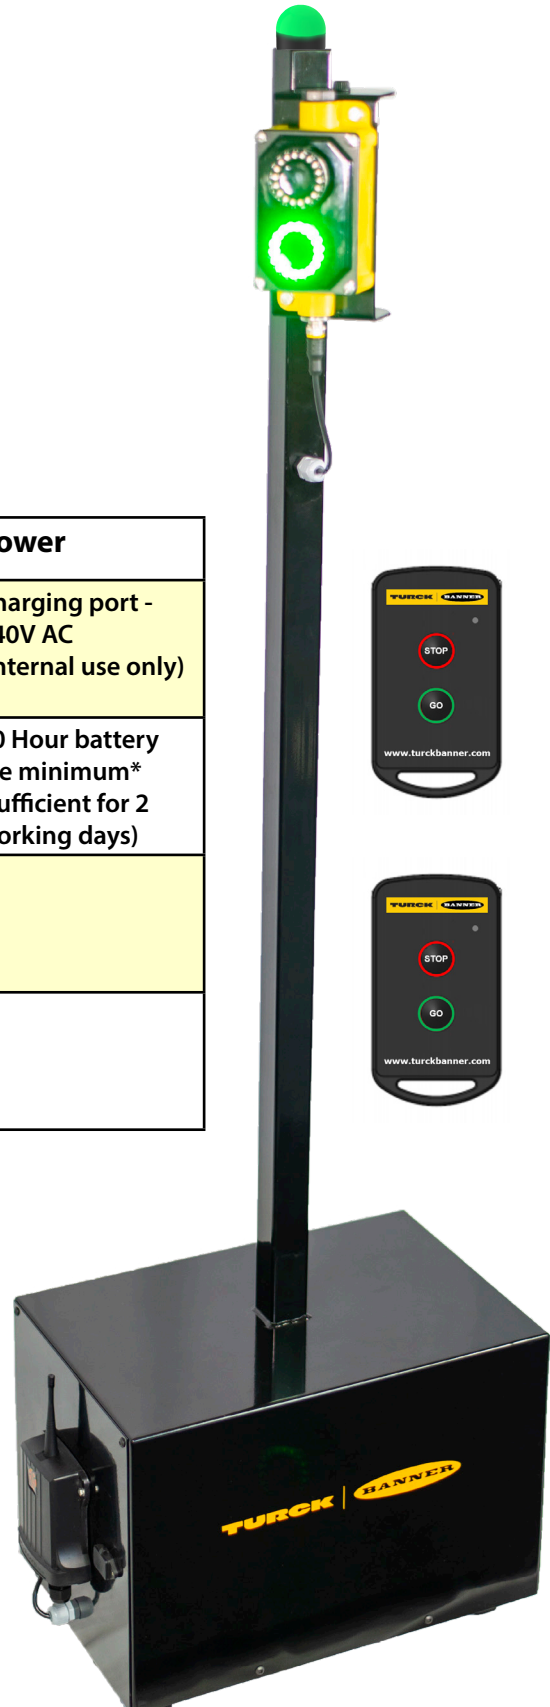

Features	Construction	Control	Power
High brightness, Daylight visible	Powder coated steel	Controller with remote (up to 150m range)	Charging port - 240V AC (internal use only)
